

DipOH:

Question Choices for the Researched Essay

The following questions are valid for candidates submitting their Researched Essay between **1st February** and **31st July 2022**. Candidates should select one question.

Candidates should refer to the '**Qualification Guide for DipOH**' for further information about writing their Researched Essay.

Question Choices:

1. Review and discuss the appropriateness of the methods available to determine exposure to airborne hazards within a galvanising plant.
2. How is the thoracic fraction of a workplace aerosol defined and assessed? In what situations and for what exposures might it be appropriate to undertake thoracic aerosol sampling?
3. How might the application of "Artificial Intelligence" concepts and approaches change practice, research, or policy development in occupational hygiene? Could we increase the 'reach' of our discipline by promoting the wider development of algorithms for assessment and control of exposure?
